

# FOTOCÉLULA

## PHOTOG01A

### Características Técnicas

|                           |                                                                 |
|---------------------------|-----------------------------------------------------------------|
| Tensión                   | 220V~                                                           |
| Frecuencia                | 50-60Hz                                                         |
| Carga máxima              | <b>1200W (carga resistiva)</b><br><b>300W (carga inductiva)</b> |
| Corriente (máx.)          | 6A                                                              |
| Detección de luz ambiente | <10lux=ON<br>>40lux=OFF                                         |
| Material                  | PS (UV) + ABS                                                   |
| Protección                | IP44                                                            |
| Temp. trabajo             | -10~40° C                                                       |
| Dimensiones               | 35 x 43 x 90mm.                                                 |
